Wind RNG Timeline

Week 1 starts 10/20/2019

- **Video Link:**
  - https://www.youtube.com/watch?v=1vdoWLHyqTw&feature=youtu.be
- **VCS Link:** https://github.com/LonelyRider-cs/RandWind_Main
  - Also we shared our Google Drive to srinjita.bhaduri@colorado.edu, called CSCI 3308 Project 201-3
- **Deployment:** https://randwind.herokuapp.com/
  - Description:
    - To use RandWind, if one wants to store previous generated strings, click on "Register" on the top right-hand corner. Once registered, the user must

click "Login" also on the top-right hand corner. For future uses, the user would log in to view previously generated strings.

- To use the application, first determine how many characters desired for the random string. Enter desired integer value in the "# of characters" textbox. The maximum allowable string length is 512 characters.
- Determine string type and length. For example, "8-digits(0-7)" means 8 characters, consisting of integers 0-7, and "16-digits(0-9 and a-f)" means 16 total characters, consisting of a combination of digits from 0-9 and letters from a-f.
- Click "Generate!" The strings will be displayed on the page. If the user is logged in, the string can be stored by clicking save string.
- Click "My Generations" to view your saved strings. Clicking copy will copy the string to your clipboard.
- To generate another string, click on "Home" or the RandWind logo.

○ Refer to video and "About" section on the website for more details
